

Greenwich Conservation Advocates

I Support a Ban on Fracking Waste from Entering Our Community and the State of CT

Dear Elected Official,

Fracking is a process used to extract natural gas and oil. Millions of gallons of a toxic chemical solution are injected underground at high pressure to crack dense rock and release oil and gas. Fracking fluids and contaminated solids come to the surface and there are no good options for disposing of this toxic and possibly radioactive waste. The dangers associated pose an unacceptable risk to health and safety, municipal and private property values and natural resources. CTDEEP cannot enforce or safely regulate fracking waste, or prevent accidents, spills and leaks from contaminating soil, surface and ground waters. Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. The application of wastes and by-products must be prohibited on any road or real property, as well as the storage, disposal, handling, acquisition, sale, treatment and processing within our town. Strong leadership is needed to protect our community.

Fracking fluids and contaminated solids come to the surface and there are no good options for disposing of this toxic and possibly radioactive waste. The dangers associated pose an unacceptable risk to health and safety, municipal and private property values and natural resources. CTDEEP cannot enforce or safely regulate fracking waste, or prevent accidents, spills and leaks from contaminating soil, surface and ground waters. Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. The application of wastes and by-products must be prohibited on any road or real property, as well as the storage, disposal, handling, acquisition, sale, treatment and processing within our town. Strong leadership is needed to protect our community.

Support a Ban on Fracking Waste from Entering Our Community and the State of CT

Dear Elected Official,

Fracking is a process used to extract natural gas and oil. Millions of gallons of a toxic chemical solution are injected underground at high pressure to crack dense rock and release oil and gas. Fracking fluids and contaminated solids come to the surface and there are no good options for disposing of this toxic and possibly radioactive waste. The dangers associated pose an unacceptable risk to health and safety, municipal and private property values and natural resources. CTDEEP cannot enforce or safely regulate fracking waste, or prevent accidents, spills and leaks from contaminating soil, surface and ground waters. Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. I Support a Ban on Fracking Waste from Entering Our Community and the State of CT

Dear Elected Official,

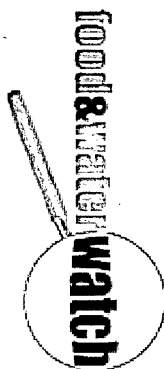

Fracking is a process used to extract natural gas and oil. Millions of gallons of a toxic chemical solution are injected underground at high pressure to crack dense rock and release oil and gas. Fracking fluids and contaminated solids come to the surface and there are no good options for disposing of this toxic and possibly radioactive waste. The dangers associated pose an unacceptable risk to health and safety, municipal and private property values and natural resources. CTDEEP cannot enforce or safely regulate fracking waste, or prevent accidents, spills and leaks from contaminating soil, surface and ground waters. Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. The application of wastes and by-products must be prohibited on any road or real property, as well as the storage, disposal, handling, acquisition, sale, treatment and processing within our town. Strong leadership is needed to protect our community.

Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. The application of wastes and by-products must be prohibited on any road or real property, as well as the storage, disposal, handling, acquisition, sale, treatment and processing within our town. Strong leadership is needed to protect our community.

I Support a Ban on Fracking Waste from Entering Our Community and the State of CT

Dear Elected Official,
Fracking is a process used to extract natural gas and oil. Millions of gallons of a toxic chemical solution are injected underground at high pressure to crack dense rock and release oil and gas. Fracking fluids and contaminated solids come to the surface and there are no good options for disposing of this toxic and possibly radioactive waste. The dangers associated pose an unacceptable risk to health and safety, municipal and private property values and natural resources. CTDEEP cannot enforce or safely regulate fracking waste, or prevent accidents, spills and leaks from contaminating soil, surface and ground waters. Instead of allowing future permits, CTDEEP should permanently ban fracking waste. Locally, I urge town leaders to pass an ordinance banning the application of fracking and other oil & gas extraction wastes. The application of wastes and by-products must be prohibited on any road or real property, as well as the storage, disposal, handling, acquisition, sale, treatment and processing within our town. Strong leadership is needed to protect our community.
